Reformer STUDIO features

The structure is made of laminated wood, a feature that gives higher resistance and weather-resistant qualities. The cart is made of plywood with a beech finish on an aluminum chassis. The sliding system consists of 8 wheels mounted on 16 ball bearings with high sliding to ensure smooth and quiet movement.

The distance between the carriage and the footbar is adjustable in 5 different positions by a patented system, which allows an optimal use of the Reformer, also conceived for people of all sizes and for those who have leg-functional limitations.

The footbar is adjustable to 4 different inclinations and is equipped with safety locks to keep it in the chosen position.

The headrest is adjustable in three positions.

The springs, of the highest quality, are made of treated nickel-plated carbon steel, to ensure maximum resilience and robustness.

The padding of the seat, the headrest and backrests is constituted by a mixture of high density neoprene foam and, in combination, provides maximum comfort for each type of exercise.

The upholstery covering is non-allergenic, environmentally friendly and non-slip.
